Examiner's Statement of Reasons for Allowance

Claims 30-43 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's invention is drawn to an OFDM-CDMA transmitting apparatus for spreading transmit symbols and makes a spreading ratio of a specific transmit symbol larger than a spreading ratio of other transmit symbols, selecting a number of multiplexing for each transmit symbol and makes a number of multiplexing for the specific transmit symbol smaller than a number of multiplexing for the other transmit symbols, multiplexing spread signals of each of the transmit symbol by the selected number of multiplexing, and distributing the multiplexed spread signals to a plurality of subcarriers and distributes at least one of chips of the specific transmit symbol whose number of multiplexing has been reduced and chip of the specific transmit symbol whose spreading ratio has been increased, only to subcarriers in a time domain, among subcarriers in a frequency domain, subcarriers in the frequency domain and the time domain, and the subcarriers in the time domain, without widening a frequency band.

Applicant's independent claim 30 recites, *inter alia*, an orthogonal frequency division multiplexing section that distributes the multiplexed spread signals to a plurality of subcarriers and distributes at least one of chips of the specific transmit symbol whose number of multiplexing has been reduced and chip of the specific transmit symbol whose spreading ratio has been increased, only to subcarriers in a time domain, among subcarriers in a frequency domain, subcarriers in the frequency domain and the time domain, and the subcarriers in the time

domain, without widening a frequency band. Sakoda teaches a transmitter that performs multi-carrier communication for transmitting an information bit stream to be transmitted with a plurality of subcarriers. Moreover, the transmitter can increase the transmission power by using only the spread code having one type of a spreading ratio and performing multiplication in parallel corresponding to the increase of bits rate (paragraphs 148, 177). However, the cited references and a thorough search did not disclose spreading a specific symbol with a larger spreading ratio than that applied to other symbols and applying a smaller degree of multiplexing to the spread specific symbol as claimed. Therefore, applicant's independent claim 30 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Accordingly, applicant's invention is allowed for these reasons and the reasons by applicant in amendments and arguments.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
